PANTONE®
RM200QC Imaging Spectrocolorimeter RM200QC

Overview

Designed to provide stable color measurements, comparisons, and reporting, the RM200QC Imaging Spectrocolorimeter makes testing and managing color consistency from product lot to lot easy and reliable. Use this tool for color control and to create color standards and measure against them when reviewing products with painted, fabric, and metal surfaces.

Format

- Handheld, portable electronic device
- Protective case makes device easy and safe to store and travel
- Can be directly connected to a printer port for automatic report printing without need of an additional computer

Color

- Easy to record or upload a Pantone or Munsell standard
- Quickly takes a reading and delivers a clear pass or fail message in addition to other reading data
- Custom set to desired degree of error allowance

Application

Use Case: for color quality control in the color lab, on the manufacturing floor, or during supplier inspections

- Automatically calibrates when device is turned on
- Easily syncs to software programs for easy and quick reporting
- For best results, use on flat, matte surfaces

Production & Evaluation
