

PANTONE® Plastics Opaque & Transparent Selector

PPTQ100

Overview

An entry point for Pantone Plastics, this system offers a set of 1,005 opaque and 735 transparent chips. Perfect for inspiration, the colors in the system are separate from the Pantone system and not recommended for color communication or production. Product managers and designers can use this set for color visualization.

Format

- Five book collection with 30 chips per page
- Each chip measures 1.1" x 1.3", smaller than for spectrophotometer readings
- Three tiers of thickness, 1mm through 3mm, allows for accurate color visualization
- Opaque chips are glossy on the front and matte on the reverse, transparent chips are glossy

Color

- 1,005 opaque and 735 transparent chips arranged in chromatic format
- Index at the front of the book provides the numeric location for each color
- Colors are not a Pantone Standard, so pigment formulation is not included
- Individual chips and pages are available for purchase when replacements are required

Application

Industry: transparent hard goods, consumer packaged goods, glassware, cosmetics, and more

Use Case: palette development and visual inspiration, not for color communication or production
