ACADEMY
Color Selection Chart Watercolors

The best-selling brand of watercolors in the United States for many years, Academy® is a "user-friendly" watercolor. Traditional ingredients, time-tested formulas, careful manufacturing and attention to quality all contribute to making Academy an easy-to-use, affordable watercolor.

Academy is of such quality that it is often used by professionals. Like Finest™ Watercolors, Academy colors that have dried on the palette are easily resolvable with water. This cuts down on waste as well as enabling artists to make their own semi-moist colors for outdoor painting.

60 colors, .25 fluid ounce (7.5 ml) tubes.

Made in the U.S.A.

The Academy line also includes a wide selection of watercolor brushes.

The left side of each color sample shows a standard wash. The right side shows a dilute wash.

The colors on this chart may vary from actual colors due to limitations of the four-color printing process. Please see our Technical Specification chart for complete information about these colors.

Lightfastness ratings conform to the ASTM standard specification for Artists Watercolor Paints D-5067.

Staining vs. Sedimentary	Lightfastness Rating
STA = Staining	I = Excellent
SED = Sedimentary	II = Very Good
(blank) = Neither	III = Moderate
	IV = Fugitive
