### Native Italian Earth Colors

Williamsburg is pleased to offer a line of traditional native Italian earths. While we have always made our siennas with fine Italian pigments, these particular earths are scarce and used primarily by art conservators. They are the same pigments used by the great Sieneese and Florentine masters. All are authentic and come from the regions of Italy made famous by these pigments. Unfortunately, because these colors are difficult to get, we can offer them only in 40 ml. and 150 ml. tubes

### French Earth Colors

Expanding upon our Native Italian Earth colors, Williamsburg is delighted to offer thirteen French Earth Colors providing even more depth to our offerings of natural earths coming from regions with historical importance, especially in terms of European art history. They appeal to painters seeking a broader palette of historical materials; as well as painters who appreciate that natural earths provide a type of texture and physical presence, a subtlety of color caused by the unique mix of impurities each mining region possesses; something that synthetic iron oxides simply cannot provide.

### Iridescent and Interference Colors

Williamsburg makes a line of iridescent colors that are both colorfast and permanent. We make these with ground mica so that even the metallic colors will not tarnish. There are some limitations inherent in the composition of these colors: in order to refract light and appear metallic or nacreous, the mica particles must be ground too small. They should be almost like tiny crystalline prisms sparkling with glints of light. Because of this, the paint has a semi-translucent quality - not the heavy covering power of aluminum radiator paint.

Imagine the colors that shoot out of a fire opal, except each color is isolated. For example interference violet goes on like an almost colorless glaze but violet "fire" picks up and reflects the light. These interference colors work best in glazes - they lose their opalescent sheen when mixed too much with other colors.
